Professional Summary

Full-Stack and DevOps Engineer with hands-on experience in IoT projects **Terrasmart**, containerization, cloud infrastructure (AWS), and full-stack development. Skilled in React.js, GraphQL, Node.js, PostgreSQL, Docker, and CI/CD pipelines. Adept at building scalable applications and deploying reliable cloud-native solutions in Agile environments.

Professional Experience

Zigron | Fullstack Developer | Islamabad - Pakistan

March 2025 – May 2025

FullStack Intern

- Developed **front-end interfaces** with **React.js** and integrated **GraphQL client** for real-time IoT data visualization.
- Built and consumed **GraphQL APIs** using **Node.js**, enabling efficient data queries from IoT devices.
- Designed and optimized **PostgreSQL database** to store sensor readings, site metadata, and device configurations.
- Deployed and maintained backend services on **AWS Cloud** to ensure scalability and reliability.
- Monitored logs, metrics, and system health to ensure uptime and reliability.
- Collaborated with teams using **Jira** (task tracking) and **Slack** (communication) in an Agile development environment.

DevOps Tasks

- Worked on and maintained a containerized ecosystem using Docker for IoT-based project (**Terrasmart**)
- Managed **AWS Cloud infrastructure** (EC2, S3, IAM, CloudWatch) to support multi-site deployments with scalability and high availability.
- Automated provisioning and configuration with **Infrastructure as Code (IaC)**, reducing manual tasks and improving deployment efficiency.
- Worked on and optimized **CI/CD pipelines** to accelerate release cycles and minimize downtime.
- Monitored logs, metrics, and system health to ensure uptime and reliability.
- Strengthened security by enforcing **IAM** policies and secure networking practices.

Education

Bachelors of Science in Computer Science (BS CS)
Virtual University of Pakistan (Aug 2019 – Aug 2023)

Projects

Terrasmart IOT-based project

- Full-stack development of a real-time **IoT monitoring system** for weather stations network controller
- **React.js + GraphQL client** for front-end data visualization.
- **Node.js + GraphQL APIs** for backend communication.
- **PostgreSQL database** to stored the data of all the sites (single-site, multi-site) and all the connected devices like weather station, repeater and network controller logs .
- Deployed services and managed scalability using **AWS (EC2, S3, IAM)**.
- Improved system reliability and collaboration with Agile practices via **Jira & Slack**.

Tools | Software

Project Management • Jira • Github	Languages • JavaScript • TypeScript • Python	Framework/libraries/env • React Js • Node Js
Tools\frameworks • Serverless (aws lambda) • Postman • MicroSoft vsCode • pgAdmin for SQL	Cloud • AWS • Vercel DataBases • PostgresSql/MySql – SQL	<u>Automation - Testing</u> • Playwright (JS) • Bash / shell • python / scripting

Interests and Activities

- I have a passion for exploring new technologies in my free time, driven by a constant curiosity about the mechanics behind the scenes.
- I thoroughly enjoy playing table tennis because of its fast pace and the quick thinking and reflexes it demands.
